

## Image Flow Extension - Version 1.0

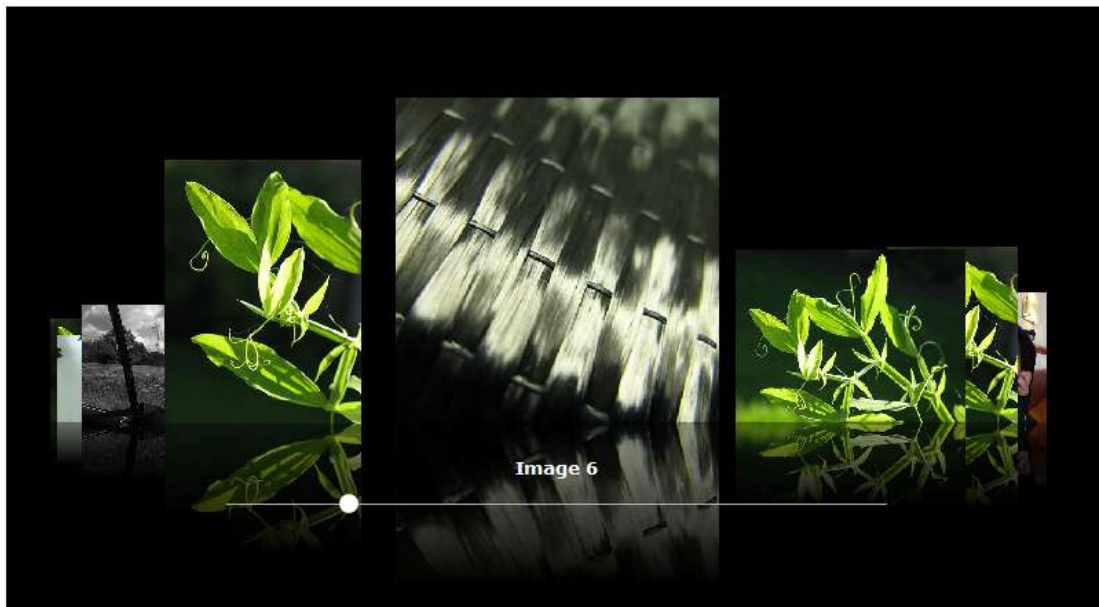

This extension is based on a javascript by Finn Rudolph:

<http://194.95.111.244/~countzero/scripts/myImageFlow/>

ImageFlow is yet another extension to display images on your website.

If your web site supports PHP, then you can also enable a cool reflection effect.

This extension was created to demonstrate the conditional code generation of Extension Builder by using the <xsl:choose> tag in a xsl template. In this case the **EnableReflection** specifies what HTML will be generated. The Extension Builder project file is separately available.

### **Properties**

#### **Images**

This property specifies the images that will be displayed by ImageFlow.

#### **EnableReflection**

Specifies whether to enable reflection.

**Please note that this effect requires PHP** to be enable on the server.

When this effect is enabled the gallery can only be previewed if PHP is available on the server. When this effect is disabled then no PHP is required!

#### **BackgroundColor**

Specifies the color of the background.

#### **FontName**

Specifies the font of the title text.

#### **FontSize**

Specifies the size of the title text.

#### **TextColor**

Specifies the color of the title text.

## ***Requirements***

WYSIWYG Web Builder 5.5 or higher.

This extension was created with Extension Builder 1.1.1
