Shout Book Extension - Version 1.0

This extension is a very simple guestbook where visitors of your website can leave a message. It is based on a PHP script created by Mirza Bajric.
This extension was created with Extensions Builder 1.00 and it includes the original project file and other files. So if you want to modify it or add new features you can load it into Extension Builder and rebuild it.

The Shout Book will be displayed inside an inline frame, so **there is no need to change the file extension of the page to PHP** where this extension is used.

Properties
EntriesPerPage
Number of entries per page.

EnableFrameBorder
Specifies whether to enable the frame border.

BackgroundColor
Specifies the color of the background.

BorderColor
Specifies the color of the table border.

LinkColor
Specifies the color of links.

TextColor
Specifies the color of the text.

Extra instructions
1. Upload 'shoutbook.dat' to your web server. This file will be used the storage for the message.
2. Change the permissions of 'shoutbook.php' to 777 otherwise you won't be able to write data.

You only have to do this once!

Requirements
WYSIWYG Web Builder 5.5 or higher.
PHP support on the server.
